

Trading Robot Guide

Thank you for choosing MZPrimer. This guide explains how to install, connect, and operate your trading robot on MetaTrader 5 (MT5). It also includes requirements, best practices, and ownership terms.

This document applies to all MZPrimer Expert Advisors (EAs) in general terms. Specific strategy parameters may differ per product.

1) Ownership & Licensing

All trading robots provided by MZPrimer are the intellectual property of MZPrimer LTD. By purchasing or downloading, you are granted a personal, non-transferable license to use the robot on your own trading accounts.

Redistribution, resale, transfer, or public sharing of the software (including the .ex5/.mq5 files) is strictly prohibited. Unauthorized distribution may result in license termination and legal action.

Trading involves risk. Past performance does not guarantee future results. You are responsible for your own trading decisions and risk management.

2) Requirements

A computer (Windows or Mac) with a stable internet connection.
MetaTrader 5 (MT5) installed on your device (desktop version recommended).

A valid trading account with a supported broker (demo or live).
Optional but recommended: a VPS (Virtual Private Server) for 24/7 uninterrupted operation. Basic familiarity with MT5: opening charts, enabling Expert Advisors, and adjusting settings.

3) Installation & Connection (MT5)

Step 1: Locate the EA file (.ex5) you received from MZPrimer.

Step 2: Open MetaTrader 5.

Step 3: In MT5, click 'File' 'Open Data Folder'.

Step 4: Navigate to MQL5 - Experts and copy the .ex5 file into this 'Experts' folder.

Step 5: Restart MetaTrader 5 (or right-click 'Expert Advisors' in the Navigator and choose 'Refresh').

Step 6: In the Navigator panel, expand 'Expert Advisors' and locate your MZPrimer robot.

Step 7: Open the desired symbol/timeframe chart, then drag & drop the robot onto the chart.

Step 8: In the settings dialog, enable 'Allow Algo Trading' if prompted, and adjust inputs as needed.

Step 9: Click 'OK' to attach the EA to the chart, and ensure the global 'AutoTrading' button is turned ON (it should be green).

4) Usage Guidelines & Best Practices

Once attached and AutoTrading is enabled, the robot will begin operating according to its internal logic and settings.

Keep MT5 running with a stable internet connection to avoid interruptions. A VPS is recommended for 24/7 runtime.

Monitor your account equity, margin levels, and broker conditions regularly.

Avoid manual interference with open trades unless part of your risk protocol. Sudden manual changes may conflict with the EA logic.

Always test new settings on a demo account before applying them to live capital.

5) Tools & Recommendations

Platform: MetaTrader 5 desktop terminal.

Connectivity: Stable broadband; consider a VPS for reliability and low latency.

Broker: Use a reputable broker with tight spreads and reliable execution for your target symbols.

Risk: Define your risk per trade and daily loss limits. Consider using a position sizing model and equity protection.

Logging: Review the Experts and Journal tabs in MT5 to diagnose issues and confirm trades.

6) Support & Contact

If you need assistance with installation, configuration, or troubleshooting, contact our team: Email: contact@mzprimer.com
Website: <https://mzprimer.com>

We typically reply within 1 2 business days. Please include your MT5 logs or screenshots for faster resolution.
